Op-tec Systems Ltd

Op-tec Systems is an independent process automation consultancy undertaking the design, supply, engineering and commissioning of control, safety and data acquisition systems for the manufacturing and process industries.

We have a reputation for quality support of legacy distributed control systems, being highly knowledgeable in process control principles and bringing DCS and IT expertise to PLC/SCADA based installations. Op-tec is focused on open and efficient software design, we believe strongly in the benefits of fully functioning and integrated control systems.

Our engineers experience the full life cycle of control systems development from conceptual design studies, through detailed system design and application engineering, to on-site commissioning and on-going service. All consultants and engineers are registered members of professional engineering institutions and are given time to undertake continuous professional development activities during their working hours.
